

Completing 3D point clouds of individual trees using deep learning:

Exploration of possible training data

Aline Bornand, Natalia Rehush, Meinrad Abegg

Problem

Incomplete tree point clouds due to:

- Occlusion
- Acquisition setup
- Distance to sensor
- Segmentation method
- Leaf-wood separation
- ...

Solution

Point cloud completion with deep learning networks¹

Possible applications in many fields:
autonomous vehicles, industrial production,
mining, robotics, cultural heritage ...

But: needs huge amounts of training data

→ Complete point clouds of trees

¹Fei, B., Yang, W., Chen, W. M., Li, Z., Li, Y., Ma, T., Hu, X., & Ma, L. (2022). Comprehensive Review of Deep Learning-Based 3D Point Cloud Completion Processing and Analysis. *IEEE Transactions on Intelligent Transportation Systems*. <https://doi.org/10.1109/TITS.2022.3195555>

Research question

What kind of data can or should be used to train point cloud completion networks for trees?

Idea: use virtually generated trees to simulate point cloud data
→ but how realistic do these simulations need to be?

Focus on:

- Segmented single trees
- Deciduous (leaf-off)
- Small-scale structures
- Point clouds of TLS-quality

→ apply an existing network

PoinTr

“Diverse Point Cloud Completion with Geometry-Aware Transformers”

Yu, X., Rao, Y., Wang, Z., Liu, Z., Lu, J., & Zhou, J. (2021). PoinTr: Diverse Point Cloud Completion with Geometry-Aware Transformers. *ICCV*.

Datasets

ShapeNetCore

- Open database of 3D shapes
- Objects from 55 categories
- Mostly artificial
- Used for training and benchmark by many point cloud completion implementations

shapenet.org

Datasets

Sapling Tree Gen free Blender add-on

simple

diverse

Datasets

The Grove

paid Blender add-on 3D Tree growing software to create detailed naturalistic trees (aimed at illustrators and artists)

Datasets

Mix of most “realistic” data

- TLS data of tree stem segments
- QSMs from TLS data, manually sculpted in Blender to create mesh objects
- + 2 best trees from the Grove

Complete stem segments from real TLS data

**3D mesh
object**

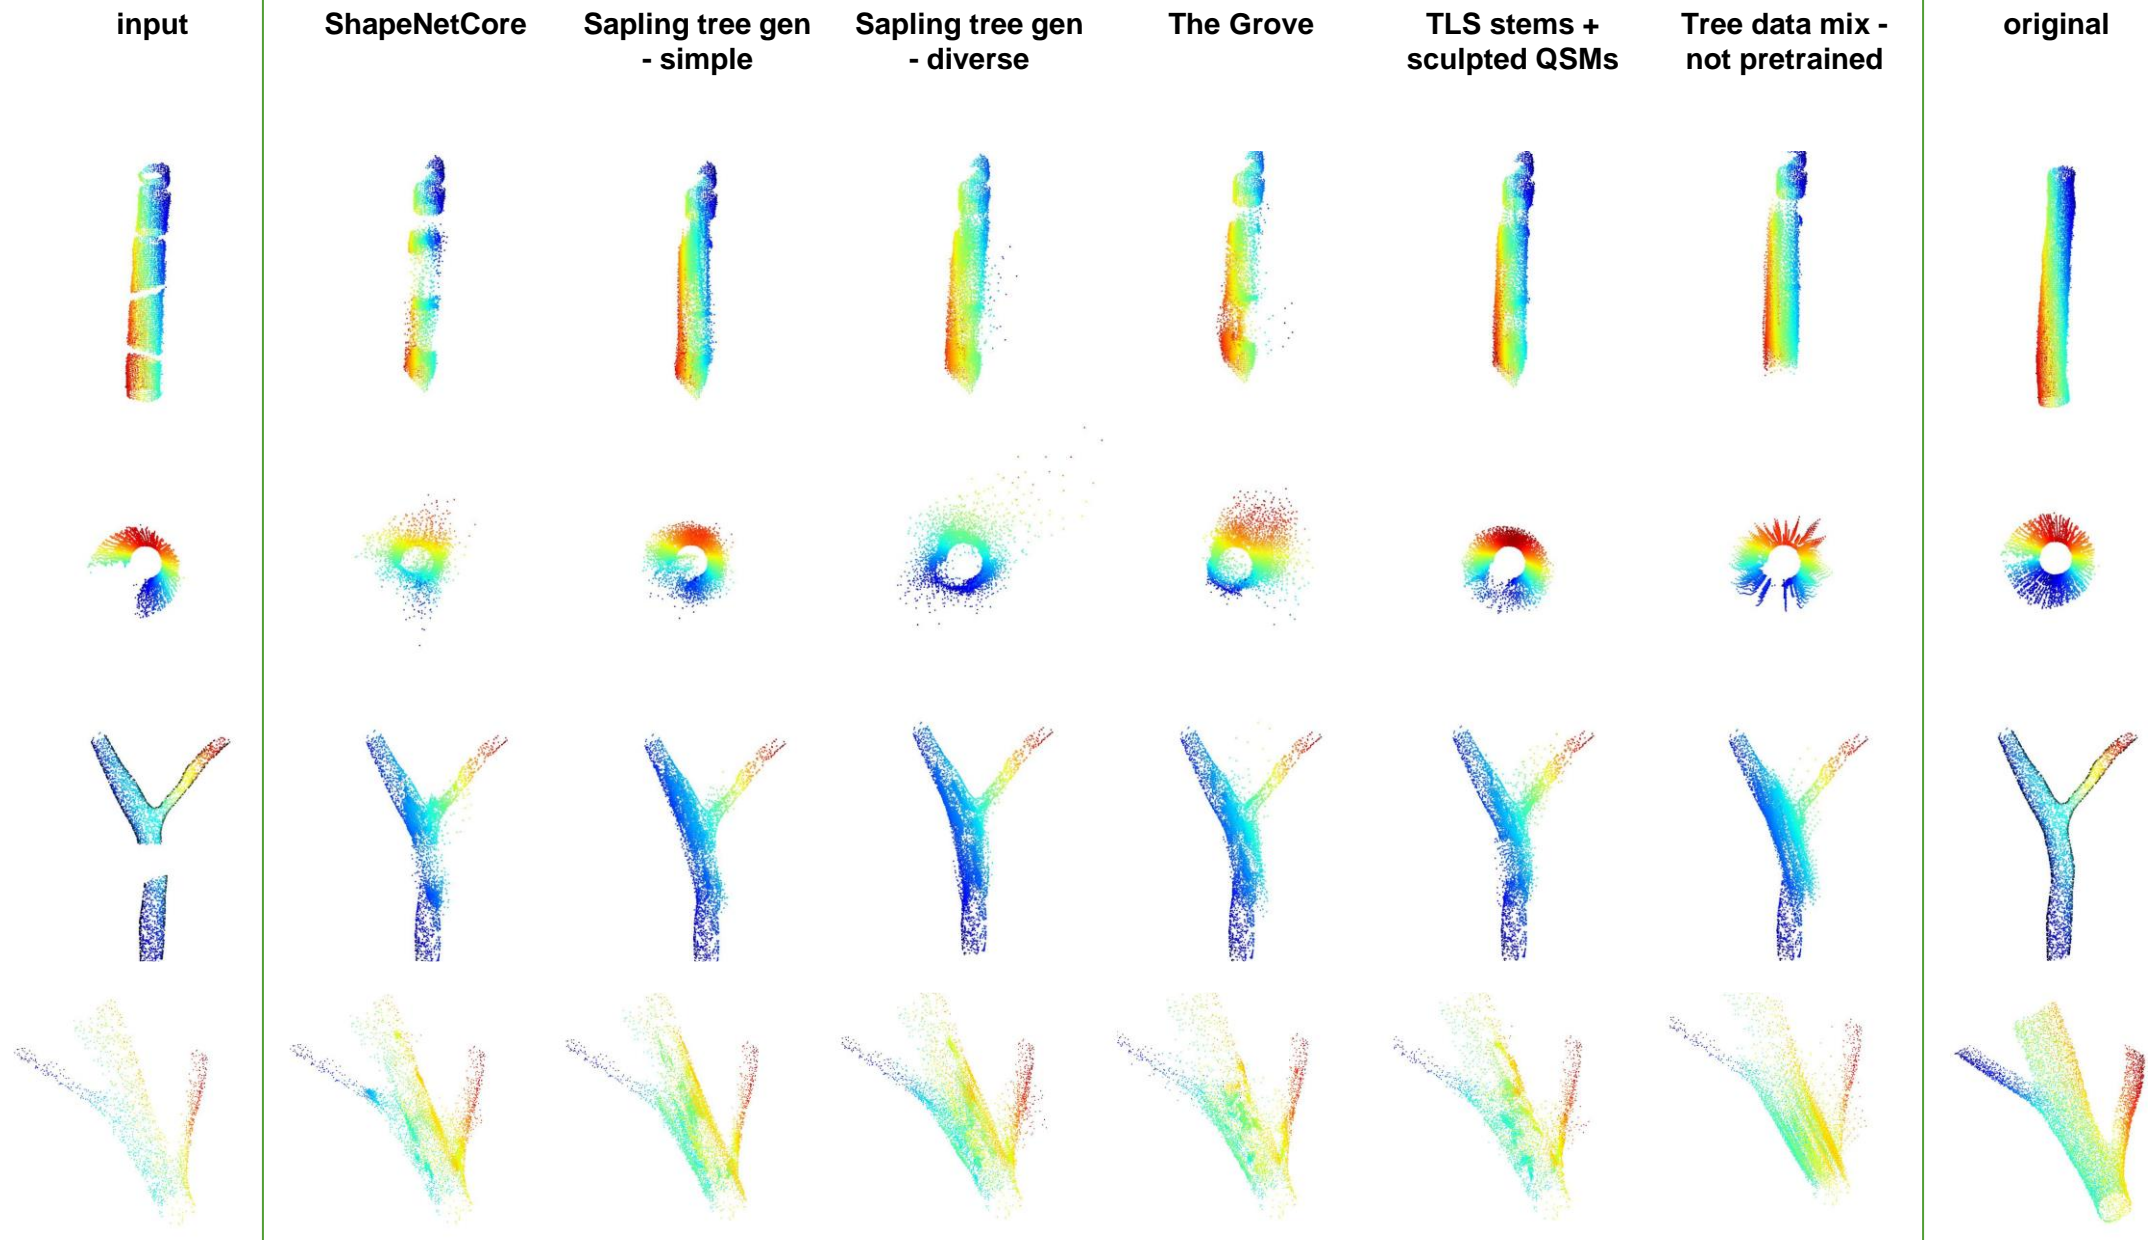

**Point cloud by random
sampling on mesh**

**Point cloud samples of 1m³ at
random locations**

Next steps

- Simulate lidar scans for training and testing (e.g. with HELIOS++)
- Real dataset of complete tree point clouds?
- From segments to whole trees
