

# The potential of GEDI to characterize mountain forests structure across scales

Lisa Mandl, Ana Stritih, Rupert Seidl, Christian Ginzler & Cornelius Senf

TLS data: Aikio Erhardt

# GEEDI – Global Ecosystem Dynamics Investigation

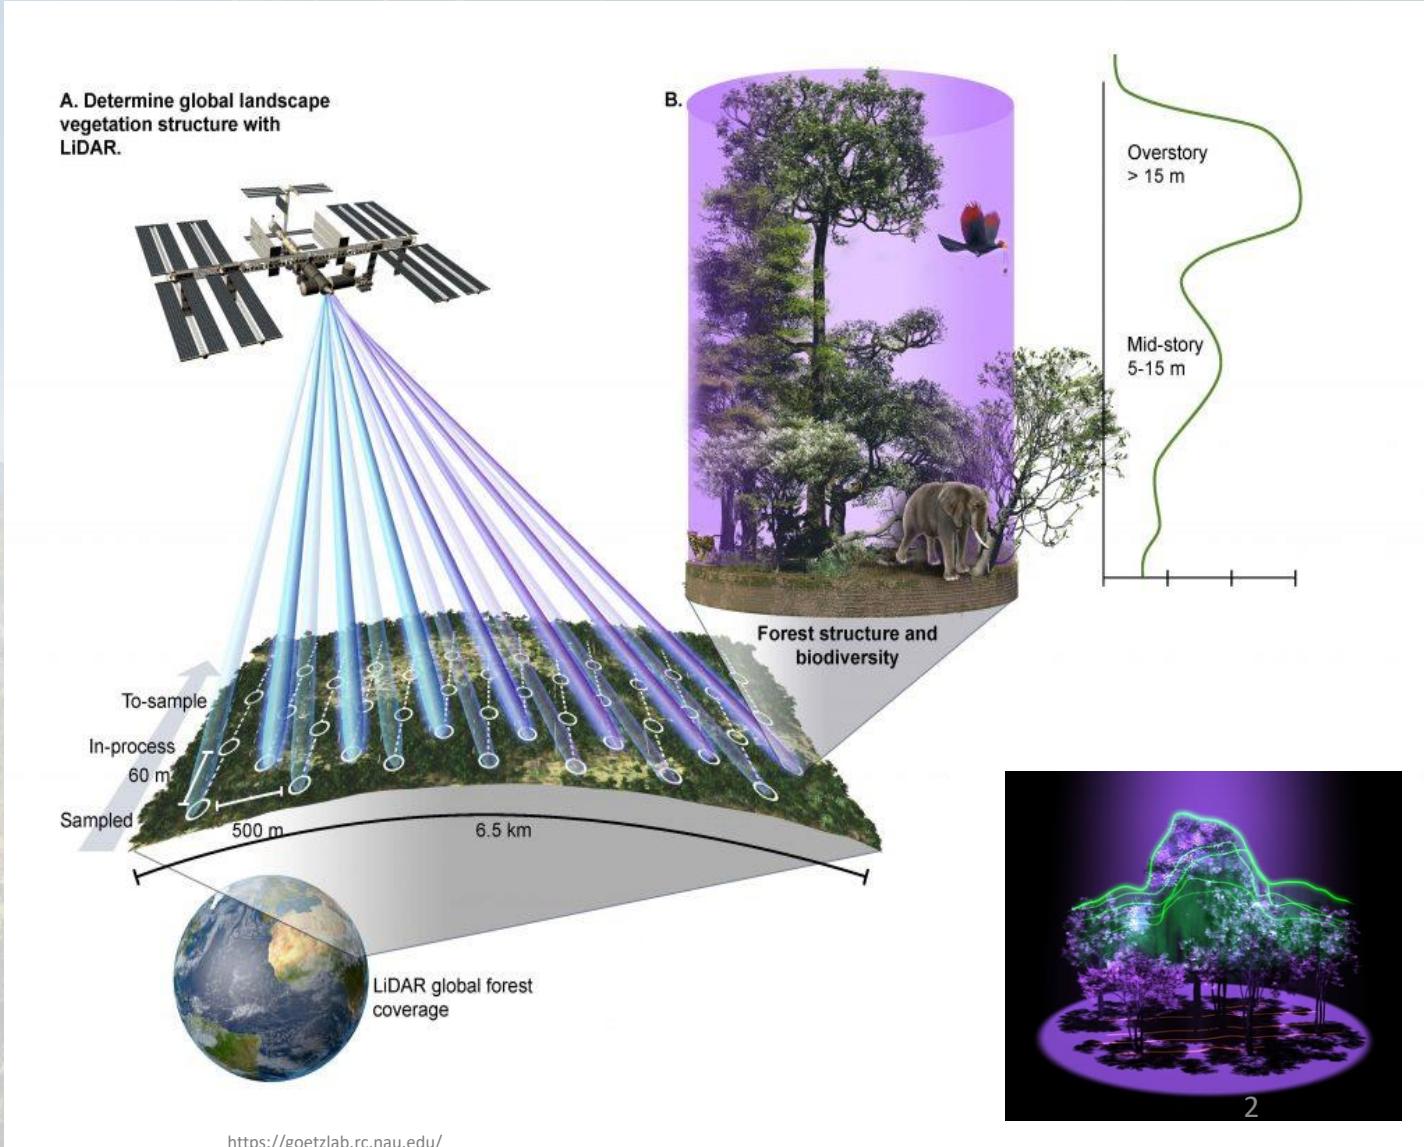

High resolution laser ranging of Earth's forests and topography from the International Space Station (ISS)

Samples radial footprints of 25 m diameter every 60 m along eight data tracks that are 600 m apart

Produces “ready-to-use” metrics (e.g. height percentiles, PAI, FHD, cover,...)

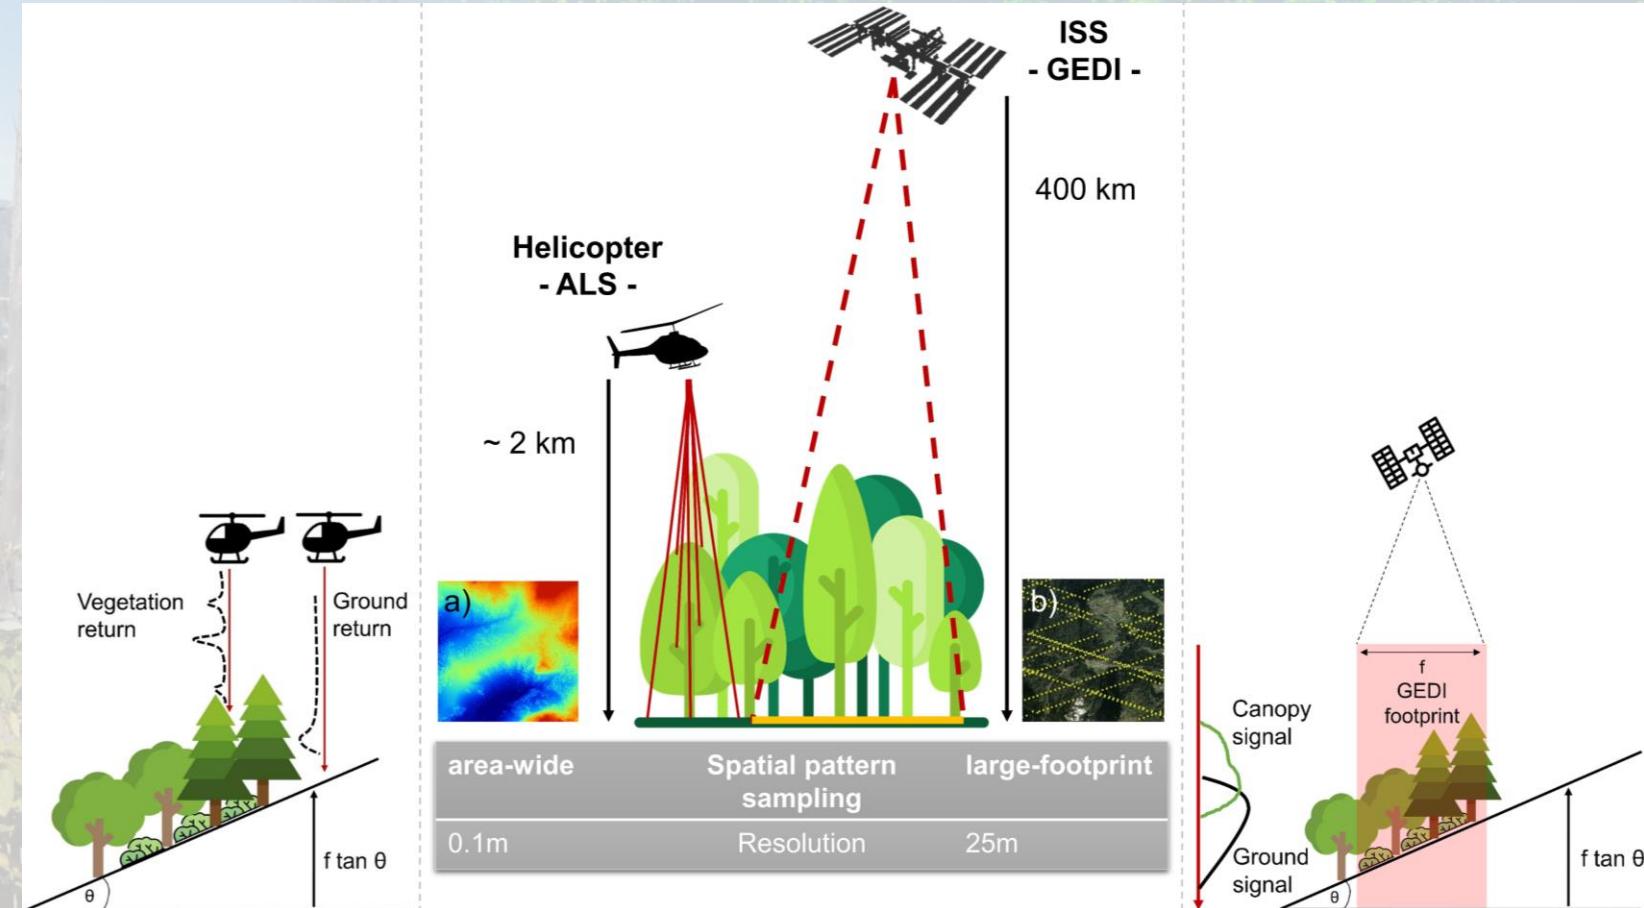

# Reference data

→ Airborne laser scanning (ALS) from Berchtesgaden and Davos as benchmark

*„How well does GEDI estimate forest structure in mountain landscapes compared to airborne LiDAR?“*

# Study sites

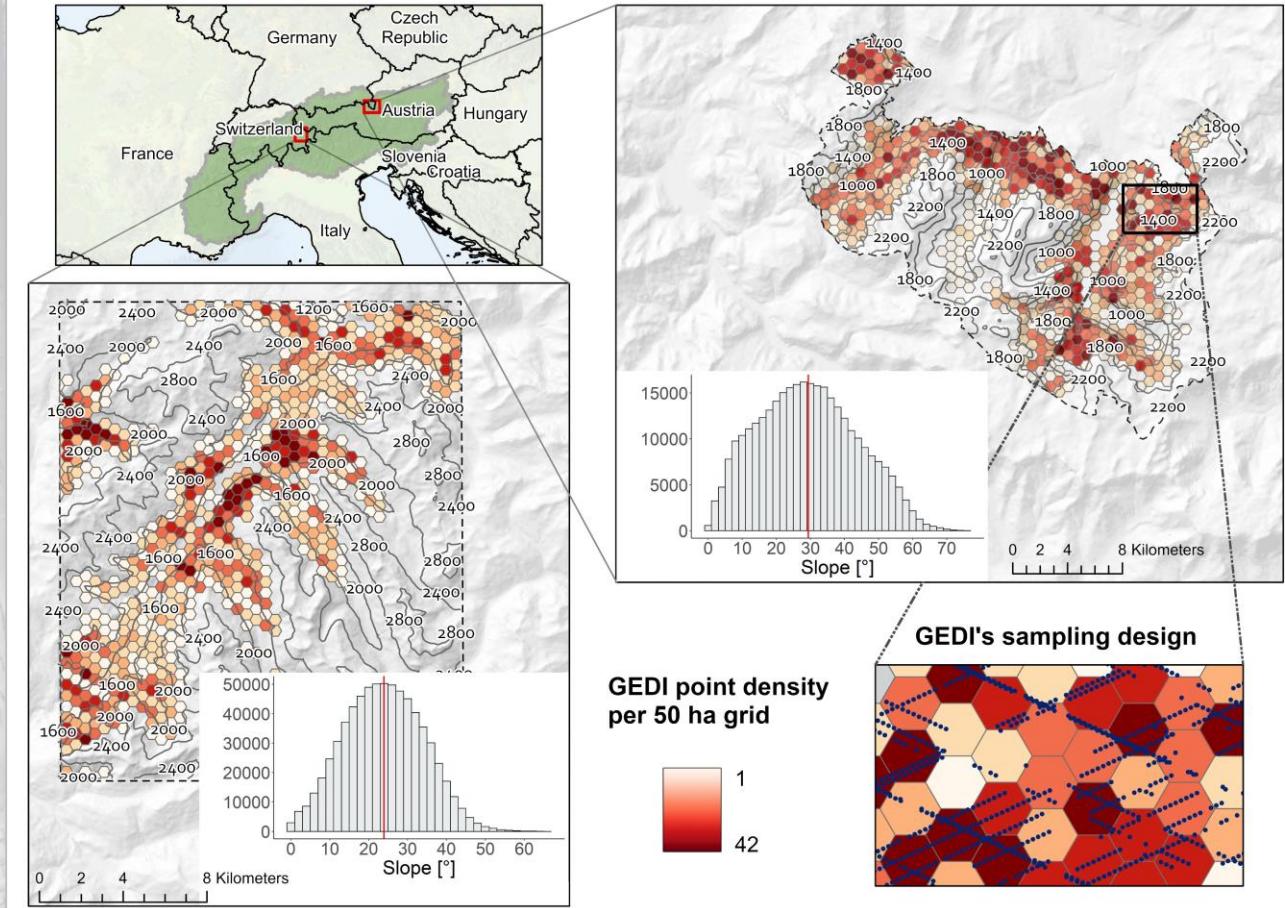

Photo: Ana Stritih

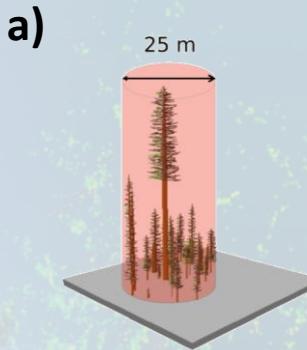

# Study design

Classification of forest structural metrics according to Atkins et al. (2018):

Group	metrics
Height	Height percentiles (RH 50, RH 98)
Area & density	Plant Area Index (PAI)
Heterogeneity	Foliage Height Diversity (FHD)
Cover & openness	Total canopy cover, understory cover

Computed / derived for ALS and GEDI data

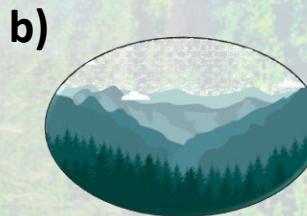

## Plot-level assessment

Statistical modeling of relationship between GEDI and ALS using standardized major axis regression (SMA)

### Stratified to:

- Slope
- Time since ALS acquisition
- Forest type

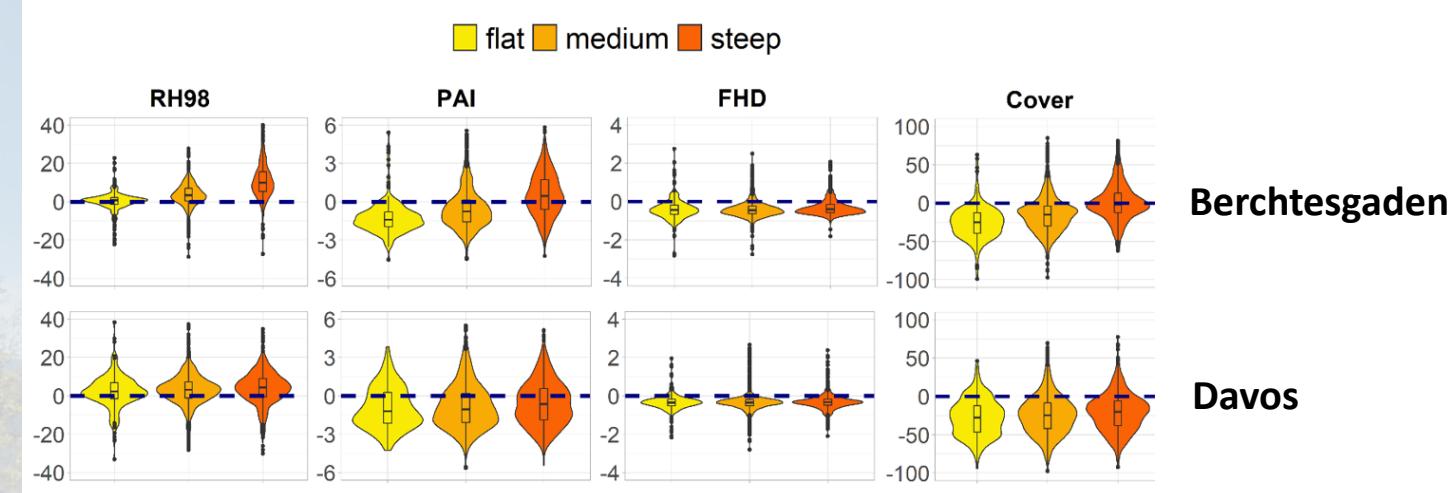

## Landscape-level assessment

- Comparison between GEDIs sampling approach and wall-to-wall ALS data
- Comparison of aggregated GEDI and ALS metrics
- Mapping of ecosystem functions and services for applied ecology

# Results – Plot level

	Slope ( $R^2$ )			
	< 15°	< 35°	> 35°	
# GEDI footprints	<b>302</b>	<b>1491</b>	<b>1010</b>	
RH98	0.50	0.55	0.29	Berchtesgaden
PAI	0.44	0.34	0.11	
FHD	0.37	0.41	0.26	
cover	0.58	0.46	0.20	
# GEDI footprints	<b>322</b>	<b>2218</b>	<b>979</b>	Davos
RH98	0.45	0.38	0.28	
PAI	0.18	0.15	0.11	
FHD	0.33	0.29	0.22	
cover	0.31	0.24	0.18	

High agreement (high  $R^2$ )  
Low agreement (low  $R^2$ )

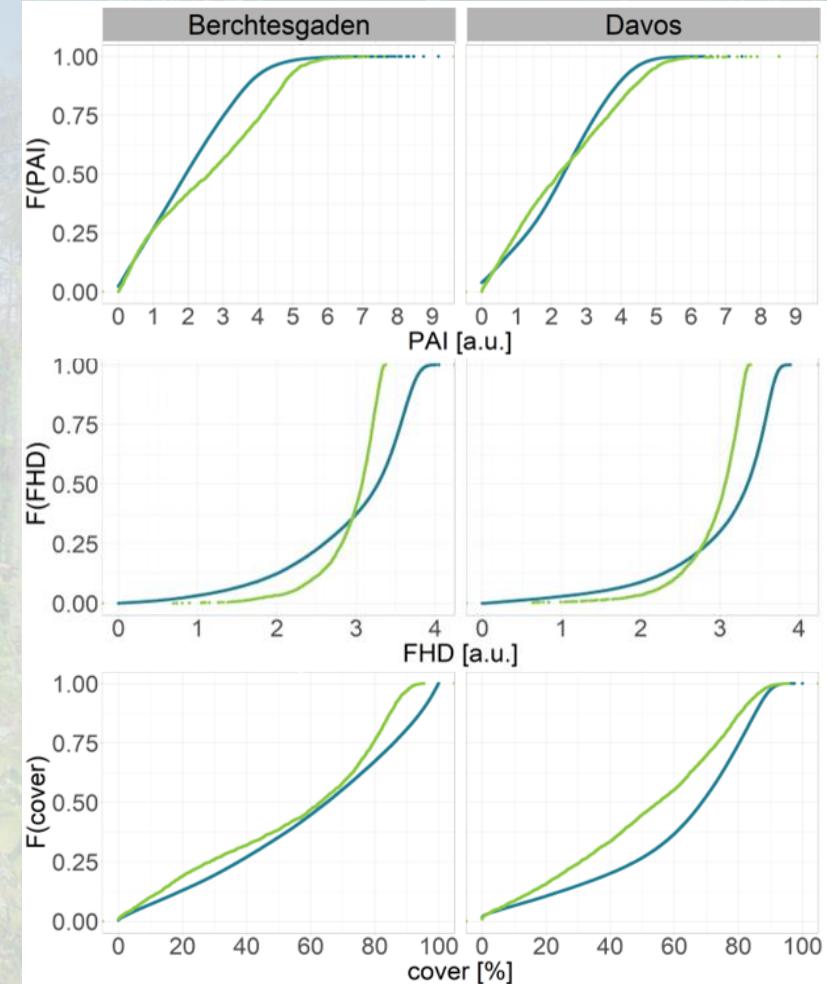

# Results – Landscape level

Horizontal forest structure

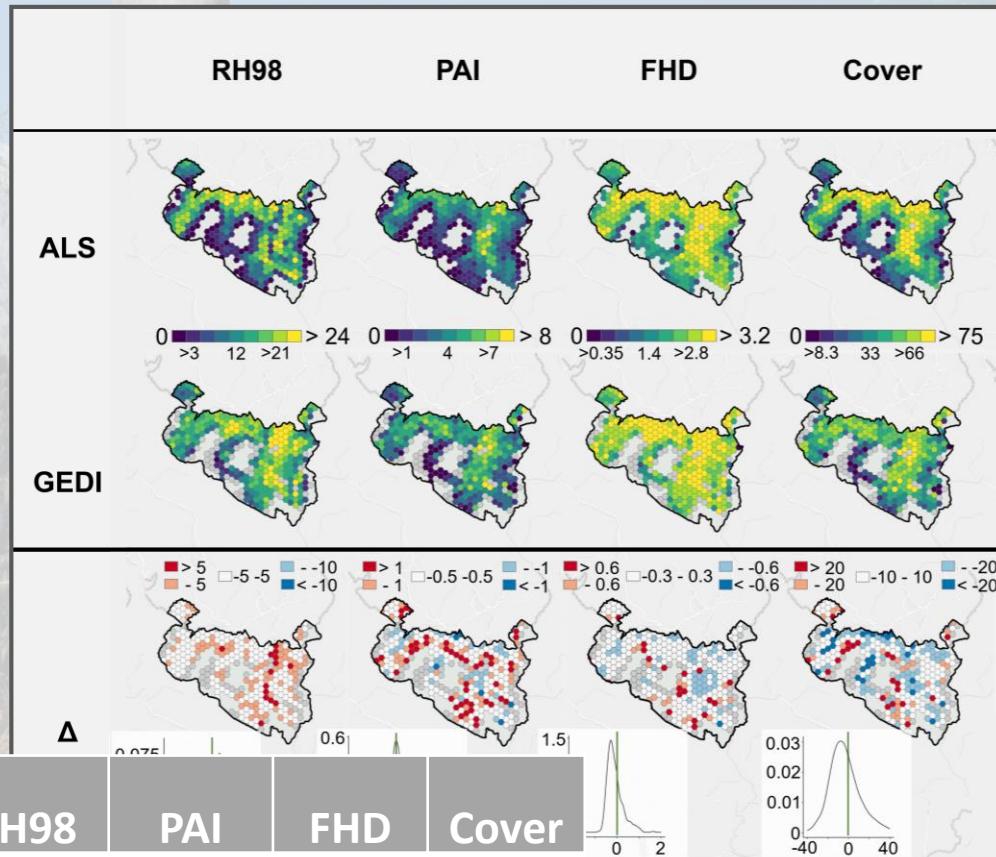

■ ALS ■ GEDI

Vertical forest structure

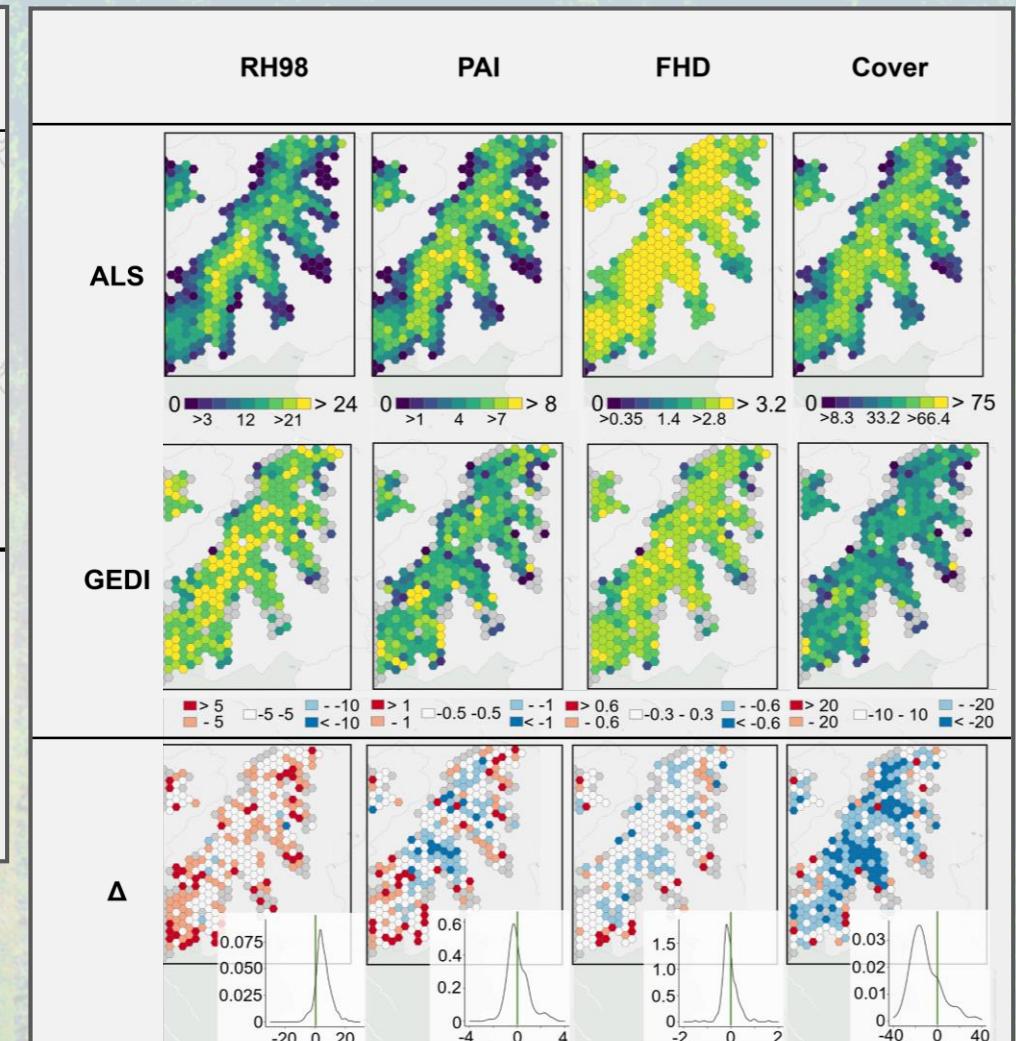

# Results – Landscape level

Berchtesgaden

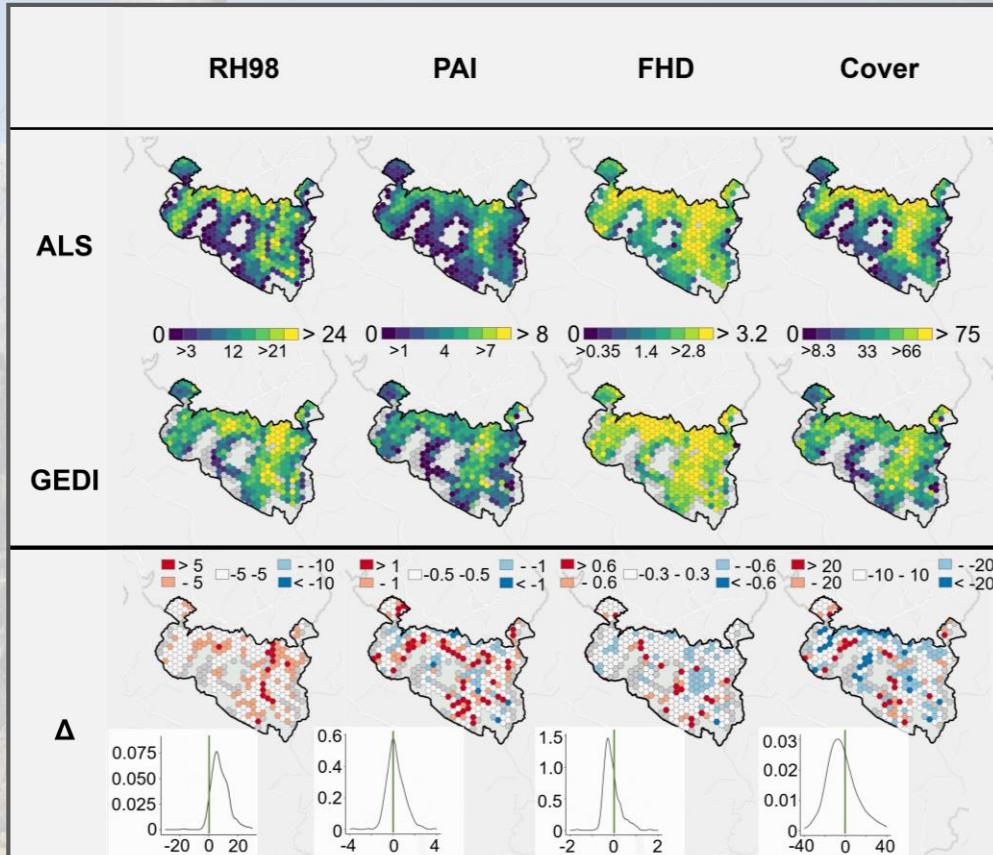

Davos

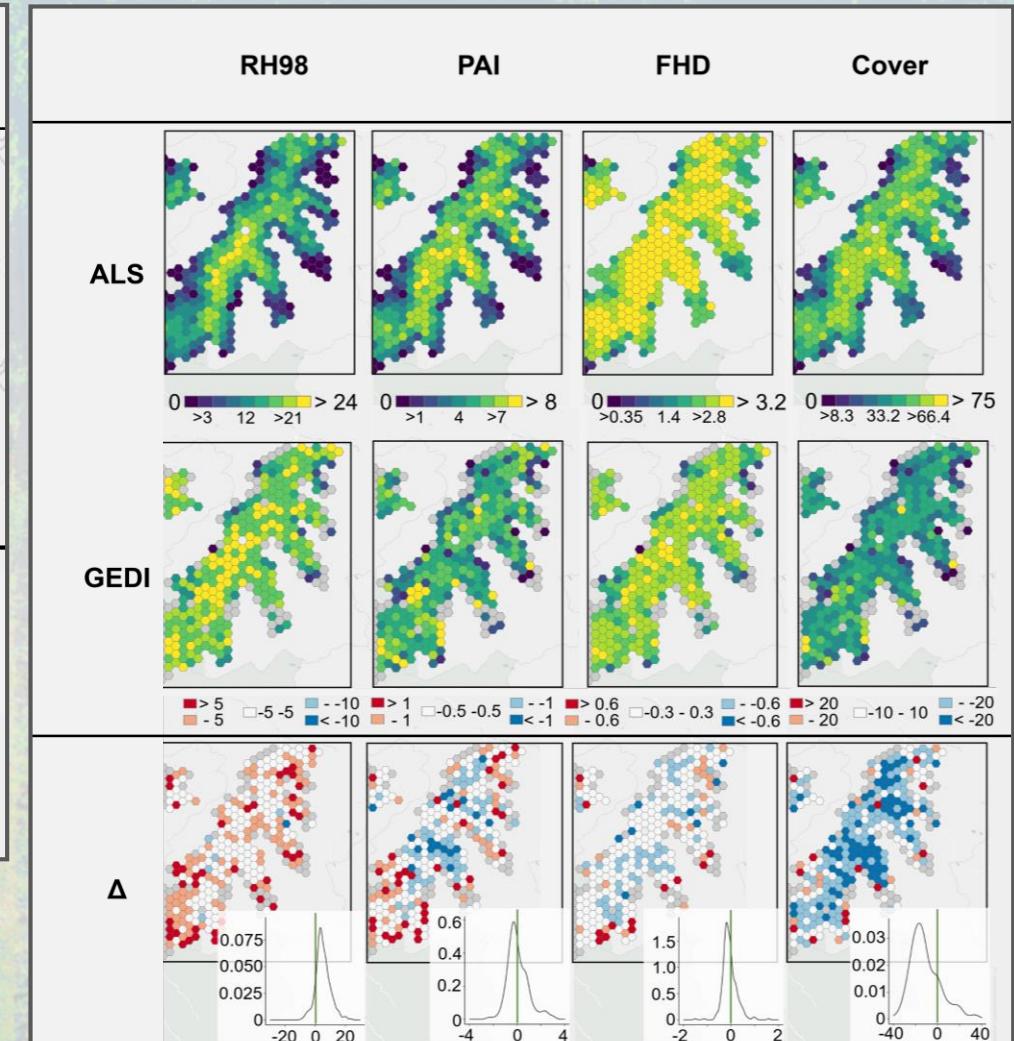

# Results – Landscape level

Berchtesgaden

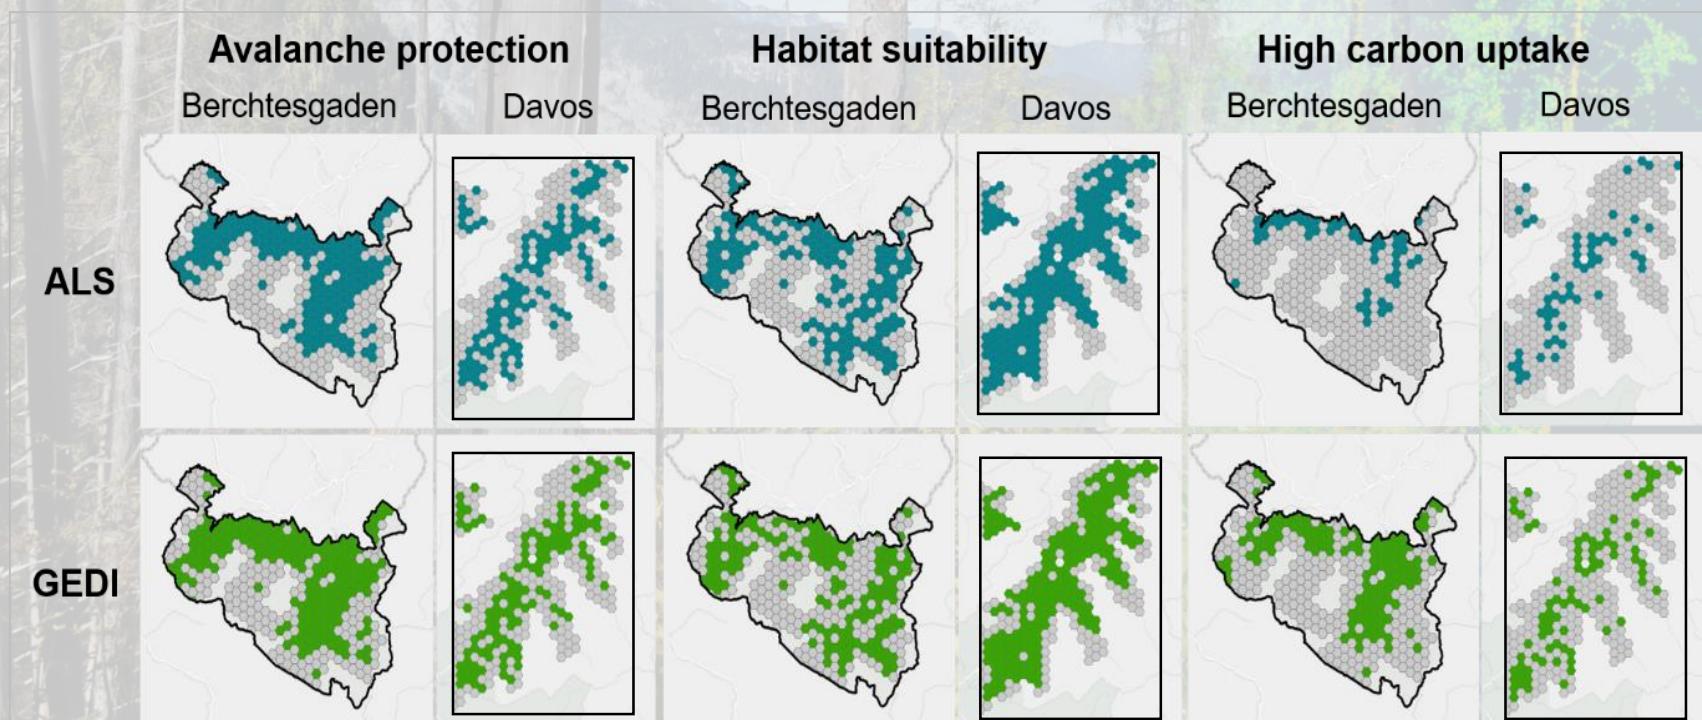

Davos

# Results – Landscape level

Ecosystem functions	Criteria	Reference
Avalanche protection	Cover > 50% AND height > 5 m	(Frehner et al., 2005)
Habitat suitability for capercaillie	FHD > 2 AND cover == [40; 70]	(Suter et al., 2002; Graf et al., 2013)
High carbon uptake & storage	RH98 > 75 <sup>th</sup> percentile AND PAI > 75 <sup>th</sup> percentile	Site-adaptive thresholds

Ecosystem service indicator	Berchtesgaden		Davos	
	GEDI	ALS	GEDI	ALS
Avalanche protection	51%	48%	37%	36%
Habitat suitability for capercaillie	41%	41%	58%	58%
High carbon uptake and storage	30%	17%	25%	15%

# Take home messages

Agreement  
between ALS  
and GEDI

Topographically complex terrain hampers the use of GEDI at the plot scale

Correction algorithms do exist but require either ALS data or high-resolution DEMs

Landscape level estimates are much more accurate, which make GEDI a useful tool for landscape analysis

GEDI is highly suited for assessing and mapping ecosystem functioning and services

## Scale matters!

Applied level

Landscape level
